

The variety that makes your spare time grow...

..and grow

You can rely on GRAHAM for:

- consistently high yields
- excellent disease resistance
- early maturity

 **Graham**
Winter wheat

Graham

Premio x Expert

Maturity -1

Grain Quality

Specific weight:
77.6 kg

Hagberg Falling
Number: 281

Protein content:
11.1%

Recommended Seed Rate:

September:
275-300 seeds/m²

October:
300-350 seeds/m²

November:
350+ seeds/m²

High yields throughout UK

UK	E	W	N
102	101	105	102

Robust Disease & Agronomics

Height (cm): 88

Lodging no PGR
(1-9): 7

Lodging with PGR
(1-9): 8

Nitrogen Advice:

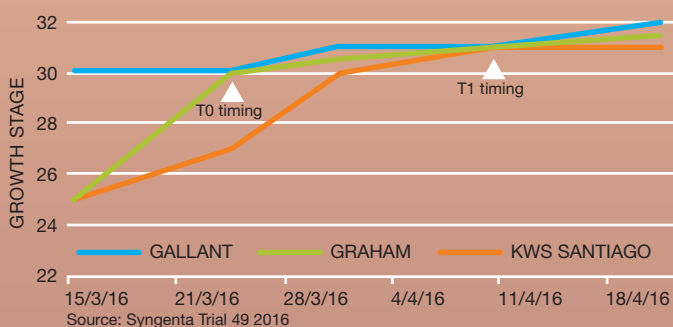

A standard nitrogen input programme for a feed variety should be applied, typically 180 kg N/ha

GRAHAM AT A GLANCE

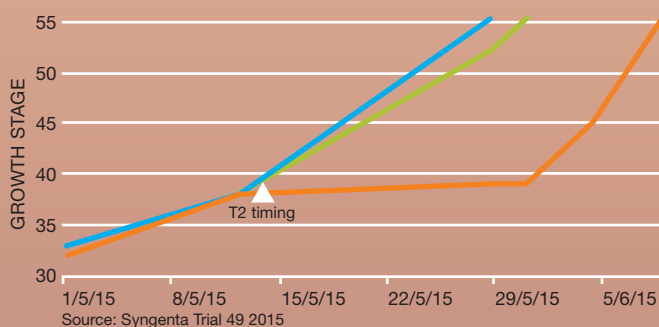

- Excellent disease resistance profile which drives high untreated yield
- Performs well in the East and West and on both heavy and light soils
- Excellent first wheat
- Very good resistance to lodging
- Exceptional grain quality
- Joint earliest maturing variety on Recommended List

GRAHAM IS RELIABLE WITH A UNIQUE GROWTH HABIT

SPEED OF DEVELOPMENT TO GS31

SPEED OF DEVELOPMENT TO HEADING

- The robust variety that produces consistently high yields when drilled right from the beginning of September until Christmas
- **GRAHAM** has a prostrate over winter growth habit and is slower to reach stem extension therefore one of the last to reach T0 timing as highlighted on the graph

▲ GRAHAM's fungicide timing

- After GS31, **GRAHAM** quickly moves through its growth stages so it will reach T1 and T2 at a similar time to JB Diego
- **GRAHAM** will then reach heading before JB Diego, and this translates into early ripening and harvest date
- The short window between T0 and T1 applications ensures you get the most out of your fungicides to give added security within the season
